Lab 3

CAS CS 320: Concepts of Programming Languages

Typing Derivation

$$\frac{\{\text{x:int}\} \vdash 2: \text{int}}{\{\text{x:int,y:int} \vdash \text{x:int}} \text{(var)} \quad \frac{\{\text{x:int,y:int} \vdash \text{y:int}}{\{\text{x:int,y:int}\} \vdash \text{x + y:int}} \text{(add)}}{\{\text{x:int,y:int}\} \vdash \text{let y = 2 in x + y:int}} \text{(let)}$$

Evaluation Derivation

$$\frac{2 \Downarrow 2 \text{ (int-eval)}}{2 \Downarrow 2} \frac{\boxed{3 \Downarrow 3} \text{ (int-eval)}}{3 + 2 \Downarrow 5} \frac{2 \Downarrow 2}{\text{ (add-eval)}}$$

$$\frac{2 \Downarrow 2}{\text{let y = 2 in 3 + y} \Downarrow 5} \text{ (let-eval)}$$
